

## Reflection

1. In retrospect, what could you have done better to reduce the time you spent solving this homework?

**Most of the time I spent on this homework was on the coding aspect of implementing the RatPoly class. If I was to do this hw over again I think I would analyze the specifications more closely to account for all test cases instead of debugging at the end using the given test cases.**

2. What could the Principles of Software staff have done better to improve your learning experience in this homework?

**I think some of the specifications were a little false in terms of specificity and details, so maybe a little bit more detail to explain functionality of methods.**

3. What do you know now that you wish you had known before beginning the homework?

**I wish I had known a little bit more about specifications before the hw, as answering some of the questions required me to go back through lecture materials to answer.**
