

## HW 7 reflection

(1) In retrospect, what could you have done better to reduce the time you spent solving this assignment?

**A lot of the time spent on this hw that should have been avoided is constantly changing the structure of the model, view, and controller split. I should of paid more attention in lecture regarding how to divide classes by this structure to avoid spending so much time relearning how to do so.**

(2) What could the Principles of Software staff have done better to improve your learning experience in this assignment?

**I think some of the instructions were a little vague regarding the test and expected files.**

(3) What do you know now that you wish you had known before beginning the assignment?  
**I wish I had known how to create a MVC style structured project.**
